HS2 SOLUTIONS

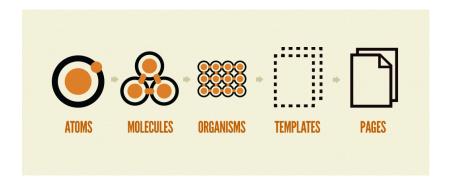

Component Based Theming With UI Patterns

COMPONENT BASED THEMING

What is it?

- Creating modular and re-usable elements
- Building a design system, not a series of pages
- Can use a pattern library for documentation and prototyping
 - Tools like Pattern Lab and Fractal

COMPONENT BASED THEMING

Why Take a component based approach?

- Efficient re-use
 - Write once, use everywhere.
 - Within a single project and even across projects (beyond Drupal even)
- Well isolated chunks of code
- Decoupling front and back end development
 - Theming doesn't have to come last
- Living Style Guide / Pattern Library
 - Simplifies coordination between designers and developers / developers and developers.
 - Rapid prototyping
 - Design system source of truth

Component Based Theming With Without UI Patterns

WHERE DO I PUT MY PATTERN LIBRARY?

- Many Drupal projects embed the pattern library in a theme. But...
- Consider making a your pattern library an external composer dependency of your theme
 - Could other projects (other CMSes?) use these components?
 - Could it allow a broader set of contributors to build components?

Time Travel Session: <u>Decouple Pattern Lab from Your D8 Theme (SF.gov)</u>

THE COMPONENT DIRECTORY

- Everything lives inside component directory in Pattern
 Lab
 - SASS
 - Twig
 - JS
 - Other Assets
 - Pattern Data

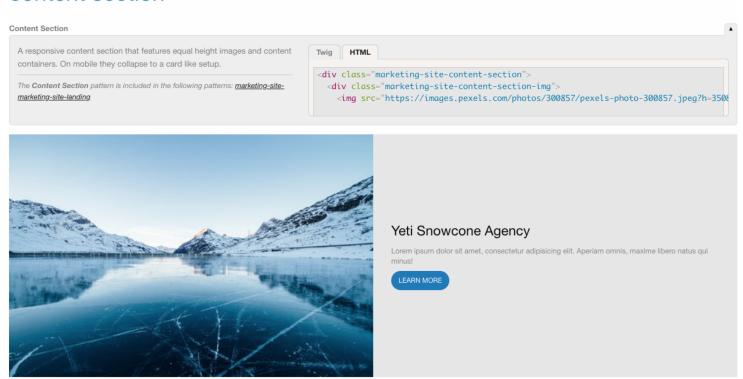

MARKUP AND STYLES

```
marketing-site-content-section.scss
div.marketing-site-content-section
                                                                             .marketing-site-content-section .marketing-site-content-sect
<div class="marketing-site-content-section">
                                                                             .marketing-site-content-section {
 <div class="marketing-site-content-section-img">
                                                                              display: flex;
   {{ image }}
                                                                              flex-wrap: wrap;
  </div>
  <div class="marketing-site-content-section-block">
                                                                              .button.round {
   <h3 class="marketing-site-content-section-block-header">
                                                                                border-radius: 5000px:
     {{ header }}
                                                                                text-transform: uppercase;
   </h3>
                                                                                margin-bottom: 0;
    {{ subheader }}
                                                                              .marketing-site-content-section-img {
    {{ button }}
                                                                                align-self: center:
                                                                                flex: 1 0 100%;
 </div>
</div>
                                                                                ima {
                                                                                  width: 100%:
                                                                                @media screen and (min-width: 40em) {
                                                                                  flex: 1 0 50%:
                                                                              .marketing-site-content-section-block {
                                                                                padding: 1rem;
                                                                                flex: 1 0 100%;
                                                                                align-self: stretch;
                                                                                background: $light-gray;
                                                                      30
                                                                                display: flex;
                                                                                fley-direction: column:
```

COMPONENT IN PATTERN LAB

content section

ADD EXTERNAL PATTERN LAB DEPENDENCY TO DRUPAL

- Current take on approach for composer managed Drupal projects:
 - In Pattern Lab project:
 - Add composer.json with "name": "(orgname)/(repository_name)"
 - In Drupal project:
 - Add repositories entry in composer.json referencing Pattern Lab repository
 - Require <u>composer-copy-file</u>
 - Configure composer.json to copy Pattern Lab instance from vendor dir to custom theme (may want to .gitignore)
 - Composer require your Pattern Lab project

Many other options – working on a blog post.

MAPPING TO DRUPAL

Defining a Twig Namespace - foundation_patterns.info.yml

MAPPING TO DRUPAL

Drupal Presenter Template - paragraph--marketing-content-section.html.twig

```
{{ attach_library('foundation_patterns/marketing-site-content-section') }}

{* include "@marketing/content-section/marketing-site-content-section.twig"
    with {
        "image": content.field_fpc_image,
        "header": content.field_fpc_header,
        "subheader": content.field_fpc_subheader,
        "button": content.field_fpc_link
    }

*}
```

PAIN POINTS

It works, but...

- Requires quite a bit of debugging
- Difficult for those not familiar with Twig / Render Array Structure
- Easy to get carried away / break things Drupal depends on (Quickedit, Panels IPE)
- card.twig is a black box to Drupal

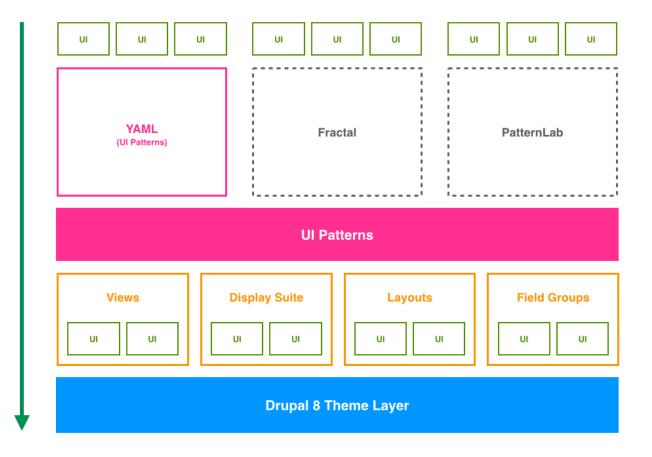

```
Drupal\Core\Template\Attribute (1)
                                                   {% include "@molecules/card/card.twig"
contents
         Available methods (17)
                               Iterator contents (1)
                                                      with {
protected storage -> array (1)
                                                         "img_src": file_url(content.field_image.entity.fileuri),
   'class' => Drupal\Core\Template\AttributeArray (2)
                                                         "img_alt": content.field_image.0['#item'].alt,
    contents
             Available methods (10) Static class proper
                                                         "header": label,
    protected value -> array (2)
                                                         "copy": content.body
      string (13) "node__content"
      string (8) "clearfix"
    protected name -> string (5) "class"
```

Component Based Theming With UI Patterns

UI PATTERNS MODULE

Define and manage components in a way that Drupal understands

- Define UI Patterns as Drupal Plugins
- Use defined patterns with component friendly modules
 - Views, field groups, panels, display suite, paragraphs (requires field layout or display suite)
- Configure data mappings in the UI
- Optional Pattern Library page exposed in Drupal
- Also allows Drupal to:
 - Preprocess patterns
 - Render patterns programmatically

UI PATTERNS LIBRARY SUBMODULE

Marketing Site Content Section

A responsive content section that features equal height images and content containers. On mobile they collapse to a card like setup.

Field	Label	Туре	Description
image	Image	image	Associated image.
header	Header	text	Header Text
subheader	Subheader Text	text	Subheader Text
button	More Button	link	Button leading to detail view.

DEFINING A PATTERN

marketing-site-content-section.pattern.yml

```
marketing_site_content_section:
label: Marketing Site Content Section
description: A responsive content section that features equal height images and content containers. On mobile
they collapse to a card like setup.
fields:
  image:
    type: image
    label: Image
    description: Associated image.
      <img src="https://images.pexels.com/photos/300857/pexels-photo-300857</pre>
.jpeg?h=350&auto=compress&cs=tinysrgb" alt="" />
    label: Header
    description: Header Text
    preview: Yeti Snowcone Agency
    type: text
label: Subheader Text
    description: Subheader Text
    preview: Lorem ipsum dolor sit amet, consectetur adipisicing elit. Aperiam omnis, maxime libero natus qui
minus!
  button:
    type: link
    label: More Button
    description: Button leading to detail view.
    preview: >
      <a href="#" class="round button small">learn more</a>
libraries:
  - pattern:
          marketing-site-content-section.css: {}
```

```
label: Marketing Site Content Section
marketing_site_content_section:
  label: Marketing Site Content Section
  description: A responsive content section that features equal height images
  fields:
    preview: >
      <img src="https://images.pexels.com/photos/300857/pexels-photo-300857</pre>
.jpeg?h=350&auto=compress&cs=tinysrgb" alt="" />
    preview: Yeti Snowcone Agency
    preview: Lorem ipsum dolor sit amet, consectetur adipisicing elit. Aperiam omnis, maxime libero natus qui
    type: link
    label: More Button
    preview: >
      <a href="#" class="round button small">learn more</a>
libraries:
```

```
label: Marketing Site Content Section
they collapse to a card like setup.
fields:
  image:
    type: image
    label: Image
    description: Associated image.
    preview: >
      <img src="https://images.pexels.com/photos/300857/pexels-photo-300857.</pre>
  header:

  - pattern:
        CSS:
           component:
             marketing-site-content-section.css: {}
libraries:
```

CAN I GET A SUGGESTION?

pattern-marketing-site-content-section.html.twig

- If 'use:' doesn't make sense for you, default template suggestions exist.
 - Could add your twig markup here
 - Can even include/extend/embed and map data.
- Can preprocess to add additional suggestions.
 - See hook_theme_suggestions_alter()

DRUPAL PATTERN LIBRARY

Marketing Site Content Section

A responsive content section that features equal height images and content containers. On mobile they collapse to a card like setup.

Field	Label	Туре	Description
image	Image	image	Associated image.
header	Header	text	Header Text
subheader	Subheader Text	text	Subheader Text

AND NOW FOR THE PART THAT EVERYONE GETS TRIPPED UP ON...

EXPOSING YOUR PATTERN IN DRUPAL

Integration modules

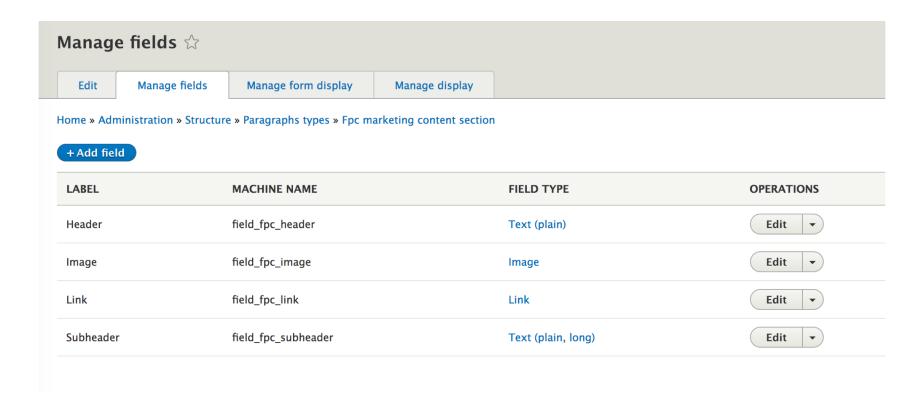

- UI Patterns Layouts makes patterns available via Layout Discovery
- UI Patterns Views makes patterns available as views row style
- UI Patterns Display Suite makes patterns available as display suite field templates
- UI Patterns Field Group makes patterns available to field groups

Looking for a place to start?

- Enable Field Layout
- Enable UI Patterns Layouts
- Begin enjoying your patterns anywhere layouts are available.

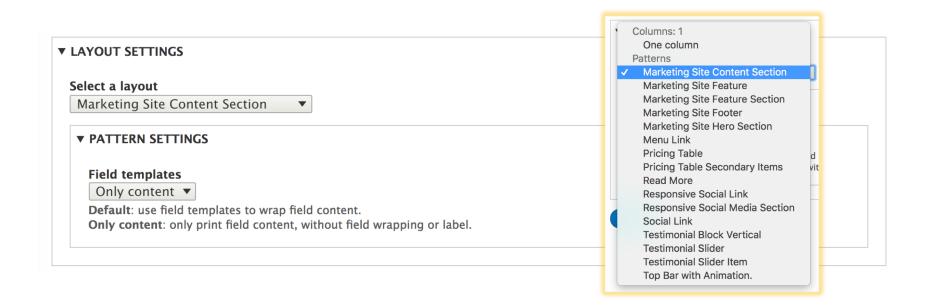

Paragraphs are common component friendly option.

CREATE PARAGRAPH TYPE

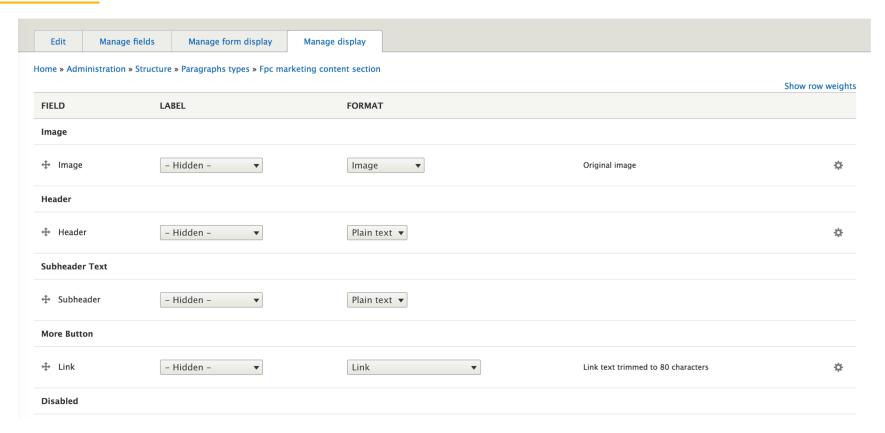

MANAGE DISPLAY: LAYOUT SETTINGS

Select your pattern from the list.

MAP PARAGRAPH FIELDS TO PATTERN FIELDS

Beyond The Basics

TESTIMONIAL BLOCK PATTERN

Testimonial Block Vertical

A testimonial block to tell your site visitors how awesome you are.

Field	Label	Туре	Description
testimonial_avatar	Testimonial Avatar	image	Associated image.
testimonial_quote	Testimonial Quote Copy	text	Testimonial quote copy
testimonial_person	Testimonial Name	text	Name attributed to Testimonial
testimonial_title	Testimonial Title	text	Title of person attributed to Testimonial
testimonial_company	Testimonial Company	text	Company of person attributed to Testimonial

Preview

UI PATTERNS DISPLAY SUITE

RENDER USING TWIG FUNCTION

```
{# With static content #}
{{ pattern('testimonial_block_vertical',
   testimonial quote: 'Pretty cool how we can use patterns all of these
   testimonial_avatar: '<imq src="https://placehold.it/60" alt="" />',
   testimonial person: 'Pattern Man',
   testimonial title: 'Same Pattern',
   testimonial_company: 'Different Context'
) }}
{# With dynamic content #}
{{ pattern('testimonial block vertical',
   testimonial quote: content.field quote,
   testimonial avatar: content.field avatar,
   testimonial_person: content.field_person_name,
   testimonial title: content.field person title,
   testimonial_company: content.field_person_company
) }}
```

Pretty cool how we can use patterns all of these different ways. And you can quote me on that.

RENDER PATTERN PROGRAMMATICALLY

```
<?php
$elements['quote'] = [
  '#type' => 'pattern',
  '#id' => 'testimonial_block_vertical',
  '#fields' => [
    'testimonial quote' => 'You must do the things you think you cannot do,
    'testimonial avatar' => '<img src="https://placehold.it/60" alt="" />'
    'testimonial person' => 'Master of teh Codez',
    'testimonial title' => 'Lead Lead Developer',
    'testimonial company' => 'Reports to No One'
                                                             You must do the things you think you cannot
                                                             do, like rendering a pattern programmatically.
\Drupal::service('renderer')->render($elements);
                                                                      MASTER OF TEH CODEZ
                                                                     LEAD LEAD DEVELOPER, REPORTS TO
                                                                60 x 60
                                                                     NO ONE
```

VARIANTS

Also, twig variables may be enough in some cases...

```
<div class="small-12 medium-3 columns">
    <i class="fa {{ icon_class }}" aria-hidden="true"></i>
     <h4 class="marketing-site-features-title">{{ title }}</h4>
     {{ description }}
</div>
```

Workflow

UI PATTERNS WITH AN EXTERNAL PATTERN LIBRARY

- Components begin life in Pattern Lab
 - Developing components that don't yet exist
 - Smaller sub-components
 - Larger scale prototyping
- Components 'graduate' to a UI Pattern in Drupal
 - Documented both in code and in pattern library
 - Predictable re-use anywhere a UI Pattern can be rendered

INTEGRATING WITH UI PATTERNS

- Many possible options:
 - The UI / various integration modules.
 - Programmatically
 - Twig functions
- Pick an approach, stick to it. Document it.

UI Patterns in a Contributed Theme

FOUNDATION PATTERNS THEME

Exposes foundation building blocks – not opinionated about how they are used

Foundation Patterns

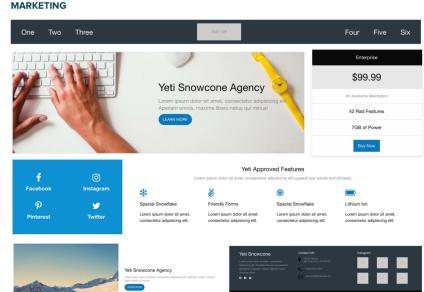

The Foundation Patterns theme is a subtheme of Zurb Foundation intended to implement Foundation components using UI Patterns. The primary purpose of this theme is to provide a way to quickly build sites using common building blocks from the Foundation framework, starting with the marketing building block kit. Secondarily, it is also intended to provide examples of how to take advantage of patterns defined by the UI Patterns module in a Drupal theme. Support for Pattern Libraries including Pattern Lab will also be provided.

Dependencies

- Zurb Foundation
- UI Patterns currently developing based on 8.x-1.x-dev
- · Component Libraries

Installation

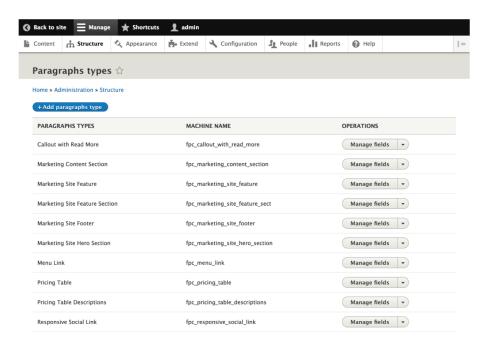

FOUNDATION PATTERNS CONFIGURATION MODULE

Pre-packaged paragraph types to jump start the use of the theme

Foundation Patterns Configuration View Version control Automated testing Posted by brianperry on 29 April 2017, updated 30 September 2017 This project is not covered by Drupal's security advisory policy. Pre-packaged configuration to jump start the use of the Foundation Patterns theme. Dependencies To use this module, the Foundation Patterns theme must be enabled. Installation

For common building blocks shared by the various Foundation Building Block Kits, enable the Foundation Patterns Configuration module.

For components included in the Marketing Building Block Kit, enable the Foundation Patterns Configuration Marketing module (Foundation Patterns Configuration will also be enabled as a dependency.)

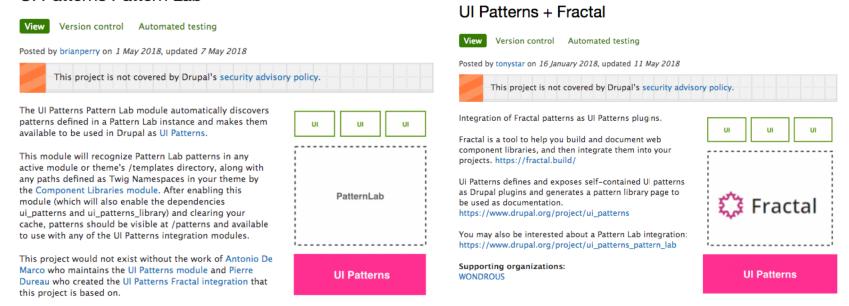

Automatic Pattern Library Component Discovery

UI PATTERNS PATTERN LAB / UI PATTERNS FRACTAL

Automatically create UI Patterns from your pattern library... really.
